Facilitating *access* to information

Support your collection development process

The SabiCat service is based on OCLC's WorldCat database and the SACat database. The service enables cataloguers to add holdings and new records to WorldCat and copy records to their local library systems.

These records are simultaneously downloaded to SACat and can be searched through Sabinet Reference and ReQuest. No additional software is required – only a web browser.

Some of the benefits of our service:

- ▼ Access to global bibliographic records on WorldCat.
- ▼ Streamline metadata workflows for print and electronic collections.
- ▼ Increase productivity through copy cataloguing - original cataloguing for every item is not necessary.
- ▼ Automatically manage your metadata and delivery of MARC records for electronic collections.
- ▼ Increase visibility of your library's holdings worldwide.
- ▼ Use your collections more efficiently.
- ▼ Synchronise your library's holdings with WorldCat and SACat by using the data reclamation service.
- ▼ Access the Library of Congress Subject Headings and Name Authority files.
- ▼ Receive credit for holdings added to the SACat database.
- ▼ Access and edit WorldCat through your integrated library management system.

A number of related services are available such as Dewey Services (print or online) and WorldShare Collection Evaluation, which can assist with acquisitions or cataloguing processes.
